## Developmental Milestones

THE SECOND YEAR
A GUIDE FOR PARENTS

ave you ever wondered how your child is growing and developing compared to other children of the same age? How do you know if your child is "on the right track"?

Your child is going through many physical and mental changes. Although no two children grow at the same rate, experts agree there are "typical" signs of development. This fact sheet provides a checklist of important milestones in your child's development during the second year of life.

It is a simple tool you can use to become aware of and appreciate the dramatic changes that are occurring in your child.

Watch for these signs in your child over a one-month period. (Even children have "bad days.") Remember, each child is different and may learn and grow at a different rate. However, if your child cannot do many of the skills listed for his or her age group, you should consult your pediatrician. If your child was born sooner than expected, be sure to deduct the number of months early from his or her age. A 5-month-old born two months early would be expected to show the same skills as a 3-month-old who was born on his or her due date. Several additional sources of information are listed in the next column.

You are the most important observer of your child's development. If your child has special needs, early help can make a difference.

If you have questions about your child's development or want to have your child tested,

- » call your pediatrician
- » call the local health department
- » contact the Make-A-Difference Information Network (They can help you find a testing locations near your community.) 1-800-332-6262, or visit http://kskits.org/resources/ MakeADifference.shtml
- » contact the Parent Helpline (through Kansas Children's Service League, https://www.kcsl. org/ParentHelpLine.aspx) (They can help you with questions about childrearing.) 1-800-CHILDREN (1-800-245-3736)

Contact your county or district extension office to obtain other publications in this series. Additional resources on parenting are also available.

The developmental information provided in this bulletin has been synthesized from a variety of professional resources to help you appreciate your child's progress. It is not a formal, standardized measurement tool.
