

BUILDING A GREENER COMMUNITY ONE YARD AT A TIME.

HEALTHY YARDS AND COMMUNITIES

IS a program designed to educate the public on environmentally conscious lawn- and garden-care techniques.

Our choices in our yards influence the entire community. When we choose practices that minimize impact, everyone benefits.

How healthy is your yard? Find out at
www.kansasgreenyards.org

Printed on recycled paper with soy-based ink.

DID YOU KNOW?

- Runoff from sidewalks and driveways enters rivers untreated. Sweep up fertilizer, grass clippings, leaves, or other potential contaminants and dispose of them properly.
- Not every lawn and garden requires the same fertilizer. Have your soil tested before fertilizing to determine what your lawn and garden needs.
- Too much fertilizer can lead to pest problems and excessive growth.
- Overwatering causes shallow root growth. This makes it harder for plants to survive drought or disease and pest infestations.
- The right plant in the right place will thrive, saving you time, energy and money.
